Learning to use shell commands

You can see the manual of the command by entering
"man <command>" . Here you find the basics of the
command. Now create a directory using the "mkdir"
command to test the commandline sessions.
Now you can enter the commands as seen in the shell
sessions to see,observe and comapare the your ouptut
and the output given in BW shell session.

Knowledge about a program internals using GNU debugger (gdb)

try to make a breakpoint in the start line in the main()
function and then execute one instruction at a time and
look for output and also examine the contents of variable
in current context and may be also others. Look for the backtrace
to see more about the instructions and their sequence and their
dependent software .check for the activities inside loops.learn
how to jump to a specific function of the program.check for the
type of a variable.
